CABINET CARE INSTRUCTIONS

Everyday care for your cabinets:

Liquid spills should be cleaned up as they occur. Liquids and other damp objects, i.e. towels, will eventually cause permanent damage should they be left unattended.

Everyday clean-up of cabinets can be done with a damp cloth and a dry cloth. Ensure you use a clean cloth every time when wiping down your cabinets, as foreign dirt, grease, and oils may inadvertently be transferred to the surface.

Cleaning melamine products:

Oils, grease, and other soils that do not respond to water can be removed with a solution of mild soap and water. The surface should be rinsed immediately with a clean, damp cloth and dried thoroughly with a soft cloth to avoid streaking or moisture seeping into the seams around the edges.

PLEASE NOTE: Never use abrasive cleaners, ammonia, bleaching agents, scouring pads or powdered cleaners on any type of cabinetry.

Cleaning cabinet hardware:

Brass and Silver cleaners are not recommended for cleaning handles. Some of these cleaning solutions contain harsh chemicals that may damage the finish on your handles.

Wash your hardware with a solution of warm water and a small amount of mild dish detergent. Dry your hardware and areas around the cleaned area immediately.

Hinges can be cleaned with a dry cloth or cotton-tipped swab.
